

Cathode Ray Tube Recycling

Recycling Lives is widely renowned as a Cathode Ray Tubes specialist and one of the UK's largest processors.

Sustaining charity through metal and waste recycling

Recycling CRT

(Cathode Ray Tubes)

Recycling Lives experts use their expertise to create a closed-loop recycling solution.

One of the largest processors in the UK

Recycling Lives has made major investments in the recycling of hazardous substances and material commodities from Cathode ray Tubes (CRTs), found in televisions and computer monitors.

These investments enable our experts to recycle the glass found in TV screens and computer monitors in a closed-loop solution, and to manufacture new products from the recycle.

Other materials, such as ferrous and non-ferrous metals, are also recovered for recycling, and every step of the dismantling process is conducted in full accordance with all relevant UK and EU safety legislation.

Recycling Lives now also leads the way in Flat Panel Display (FPD) recycling, raising the standard for British hazardous waste recycling once more.

Organisations can either deliver their end-of-life televisions and computer monitors to their nearest Recycling Lives centre or, for larger quantities, can arrange transportation via our extensive logistics service.

Why choose us?

We offer:

- Integrated recycling and waste management solutions under one roof
- A 94% recycle rate
- Tailored reporting requirements suited to your business needs
- Full waste auditing services
- A national service, delivered locally at competitive prices
- Access to a national transport network
- High environmental standards, with ISO accreditations
- Safe working practices, based on OHSAS Health and Safety management systems
- A reduced carbon footprint: recycled materials used in onward manufacturing processes use far less energy and water than virgin materials
- An enhanced CSR agenda, enabling your business to make a positive environmental, social and economic impact with no effect on your day-to-day operations
- A "fair-play" approach: all metal and waste is weighed on the Recycling Lives automated weighbridge systems, which are video recorded and governed by the local county councils.

- Legislation compliance with all relevant legislation
- A personal service with a specific key account manager
