

End of Life Vehicles

Recycling Lives specialises in the recovery and processing of damaged and end of life vehicles.

Sustaining charity through metal and waste recycling

End of Life Vehicles

Recycling Lives' extensive network of Authorised Treatment Facilities creates a local service for our customers.

Re-using is better than Recycling

Recycling Lives specialises in the recovery and processing of thousands of damaged and End of Life vehicles, treating up to 10,000 each year at its Authorised Treatment Facilities (ATFs).

Our promise

Recycling Lives' de-pollution experts inspect all vehicles when they arrive at our facilities. We make identity checks before the vehicle is de-registered and make sure that all relevant DVLA notifications are completed.

The battery, wheels and any hazardous parts are removed from the vehicle and any reusable parts are sent for re-sale within Autobreakers, a Recycling Lives division dedicated to used car parts and salvage. Purpose-built de-pollution rigs are used to extract all operating fluids.

Our customers can be confident of our environmental and data management credentials. And, given our economies of scale and market development expertise, they can be sure of a competitive price.

We also offer an abandoned vehicles service, with instant competitive payments for any vehicle collected.

Why choose us?

- Competitive rates paid for scrap and damaged vehicles
- Maximisation of metal recovery rates
- Substantial transport network
- High environmental standards, meeting all national and European environmental standards
- Permits for working with hazardous and non-hazardous waste, production scrap, End of Life products and electronic scrap
- Safe working practices, with OHSAS Health and Safety management systems in place
- Enhanced CSR agenda, enabling your company to make a positive environmental, social and economic impact, with no effect on your day-to-day operations
- Over 40 years' experience in the recycling and waste management sector
