

Environmental Policy Statement

Recycling Lives Ltd operates five fully licensed sites in the Preston area, recycling ferrous and non-ferrous metal together with general waste and also specialising in the handling of End of Life Vehicles and Waste Electrical and Electronic Equipment.

We recognise that our operations have an effect on the local, regional and global environment. As a consequence of this, the management is committed to continual improvement in environmental performance and the prevention of pollution. Environmental legislation and codes of practice will be regarded as setting the minimum standards of environmental performance, as outlined in our Site Licences and Working Plans. Specifically, we the business and the Operations Director shall:

1. Continue to continually implement our policies through the ISO14001:2004 Environmental Management System.
2. Use environmentally safe and sustainable energy sources to meet our needs. For example, we use waste oil to heat our electronic recycling warehouse and are converting our lighting to LED.
3. Maintain a sustainable environmental strategy and as such recognise our responsibilities to recycle and reuse materials wherever possible.
4. Minimise landfilling; the nature of our operations means that we recycle automotive vehicles, electronic scrap, other metals and general waste. Where we dispose of our waste we will do it in a safe and responsible manner so to prevent pollution to land, air and water.
5. Implement our policies through a dedicated training program. Various members of management and site staff have attended the CIWM's Waste Awareness Certificate at the Centre for Waste Management at the University of Central Lancashire and together with staff holding WAMITAB and COTC certification they facilitate the transfer of best practice to other employees within the organisation.
6. Set continuing environmental targets and goals designed to improve our environmental performance. Initial reduction targets have been achieved by the proposed deadline set.
7. Co-ordinate route planning and delivery schedules to reduce fuel consumption and exhaust emissions using a dedicated DBS and NavMan System.
8. Conduct an continual self-audit of our performance in order to ensure compliance with all applicable environmental legislation as well as follow industry standards set for the treatment of End of Life Vehicles, and BERR for WEEE.
9. Seek to publicise our environmental performance by providing information to employees, stakeholders and the general public. This information shall be provided in the Company's literature and fliers, and be relevant to the target audience.
10. Review and update this policy on at least an annual basis, or as appropriate to reflect the businesses changing requirements.
11. The policy is available to all members of staff and the public through our website, reception areas or as may otherwise be reasonably requested.
